

To Whom It May Concern; Regarding the proposed legislation (HR4026) , please note my strong opposition to any restrictions on what programming may be offered by a satellite radio service that is paid for entirely by it's subscribers. I am an over the road truck driver and have been in this profession for over 25 years. XM satellite radio is by far the greatest thing to come down the pike for truckers since the advent of air conditioning. The trucking industry has just gone through the first six months of new hours-of-service regulation reform that the congress in it's not-so-infinite wisdom passed as an answer to some do-gooder citizen's organization railroaded them into. Now, you think you will cave into the NAB by making the satellite radio service take away a traffic and weather channel offering that will probably do more to increase the safety of the trucker and motoring public than all the HOS regulations that have ever been inacted. Please rethink this before you act. The safety of millions are at stake. Thank you . P.D.S.
